**New CatalystComplete™ Release Supports
IBM Technology; Features Tightly Integrated Labor
and Transportation Management Solutions**

*Supply chain software also offers RFID compatibility and out-of-the-box integration
with SAP WM*

Milwaukee, WI— Catalyst International, Inc., a global provider of supply chain execution (SCE) solutions, has launched its new CatalystComplete™ 9.2 SCE solution suite release, which fully supports the core technology stack of IBM and features enhanced composite applications that can be easily integrated into any Catalyst WMS, SAP® WM or other WMS solutions.

The new solution suite is compatible with IBM DB2 Universal Database, IBM WebSphere® Application Server, IBM WebSphere MQ, AIX operating system and other products. It offers expanded functionality for labor management – which typically represents the largest portion of distribution costs – as well as for transportation management and slotting.

In addition, the RFID capabilities of CatalystComplete 9.2 include customizable EPC and U.S. Department of Defense (DoD) tag assignments, enhanced filtering, support for additional RFID and related devices, and advanced process and event management capabilities. The SCE solution suite also offers device management integration to the SAP Auto-ID Infrastructure.

“Our latest solution suite combines modular flexibility and user-specified capabilities with ease of integration with IBM, SAP WM and other technologies,” said James Treleaven, president and CEO of Catalyst. “CatalystComplete further reinforces our commitment to give customers practical solutions for optimizing the value of their supply chains, no matter which technology platform they decide to use.”

Catalyst’s *Enterprise Labor Management and Reporting* is a powerful tool for controlling labor expenses and achieving fast ROI. Its enhanced capabilities include multi-shift support, department level reporting, idle time tracking and analysis, and performance feedback for online users.

The *Transportation Management* module facilitates integrated transportation planning, execution and auditing for multiple distribution models (traditional and flow-through) and transportation methods. It allows customers to use multiple parcel manifesting solutions and improve their performance on compliance, dynamic routing and consolidation.

Catalyst’s integrated *Slotting* solution provides a flexible, rules-based methodology to optimize inventory positioning for outbound distribution. It optimizes replenishment activities by taking into consideration other warehouse tasks and improves productivity by up to 25 percent.

About Catalyst

Catalyst International, Inc., delivers software and solutions that enable companies to optimize the performance of their enterprise supply chains. Catalyst is the only resource that combines over 25 years of industry leadership in warehouse and logistics software development with an in-depth understanding of ERP systems. Catalyst has provided successful SCE solutions for customers around the world, including Boeing, Brown Forman, Reebok, Office Max, Panasonic, Rayovac, Subaru, and The Home Depot. It is headquartered in Milwaukee, WI and has offices or representatives in the UK, Italy, Mexico and South America.
